INGREDIENTS

Sun-cured Alfalfa and Orchard Hay

FEEDING RECOMMENDATIONS

Alfalfa/Orchard hay is the most popular hay mix fed to horses around the world. Alfalfa is a legume forage with moderate high protein and highly digestible fiber. Orchard grass is a grass forage with moderate protein and high fiber content. Together these exceptional forages make a highly palatable and balanced mixed hay feed. Gradually introduce Montana Premium Forage Alfalfa/Orchard Pellets to your animal to a max daily intake of 1% of body weight.

Montana Premium Forage Alfalfa/Orchard Pellets are recommended to be soaked in water for 30 minutes and fed wet to horses with dental problems and horses that aggressively consume their feed.

Montana Premium Forage Alfalfa/Orchard Pellets should not be the only source of forage but rather accompanied by some long stem forage (hay). Always provide free access to fresh clean water. If you are not sure about the use of pellets for your horse please contact an animal nutritionist.

This product is also recommended for other large animal species such as Cattle, Sheep, Goats, Pigs, Llamas and Alpacas. Please consult an animal nutritionist for other animals' daily intake recommendations.

To maintain product quality and ensure safety, properly store product in a covered, cool and well-ventilated environment. Never feed moldy or insect infested forage to horses.

This product is manufactured in a facility that handles a variety of alfalfa and grasses.
